## **Functional prognosis**

(NB The determinants apply particularly to strokes in the anterior circulation of the carotid artery.)

# **KNGF Guideline** Stroke

Presentation (referral)								
	General patient details <ul> <li>diagnosis at referral</li> <li>laterality of stroke</li> <li>type of stroke</li> <li>date of stroke</li> <li>recurrent stroke</li> </ul> Other details Information from patient's medical file or file kept by other discipline (at hospital or institution)							
	•							
Additional history-taking / heteroanamnesis	<ul> <li>patient's preferred hand</li> <li>pre-existing functioning</li> <li>patient's domestic situation</li> <li>presence of home adaptations/aids</li> <li>relevant medical history (CIRS)*</li> <li>relevant psychiatric history (CIRS)*</li> <li>* This information may be available from the patient's medical file.</li> </ul>							
Additional investigations	<ul> <li>diagnostics</li> <li>use of measurement instruments in accordance with Clinimetrics Flowchart</li> <li>physical therapist's findings / results of additional investigations</li> <li>impairments of body functions, limitations of activities, and restrictions of participation see Quick reference card Additional investigations</li> </ul>							
Analysis	prognostic determinants: see Functional Prognosis Flowchart							
utic Process								
Treatment plan	<ul> <li>defined interdisciplinary goal</li> <li>interdisciplinary agreements</li> <li>expected duration of treatment, number of sessions a week and intended duration of session(s).</li> </ul>							
	×							
Treatment	See Therapeutic Process Flowchart							
	↓ 							
Evaluation	<ul> <li>Depending on presenting problem and related treatment goals and/or at physical therapist's discretion</li> <li>Use of measurement instruments in accordance with Clinimetrics Flowchart</li> </ul>							
Conclusion of treatment episode	<ul> <li>date and reason for discharge/conclusion of treatment</li> <li>agreements about aftercare</li> </ul>							
	heteroanamnesis Additional investigations Analysis Utic Process Treatment plan Treatment Evaluation							

### **Clinimetrics**

Domain ICF level		(H)AR	VR	LR	RC	Chapter C
Walking and walking-related functions and activities						
Functions:						
MI for lower extremity	muscle strength	•		•	•	
10MWT comfortable (FAC $\ge$ 3)	walking speed	•		•	•	
FMA for lower extremity	selective movements	•		•	•	
10MWT maximum (FAC ≥ 3)	walking speed	•		•	•	
6MWT (whether or not combined with Borg RPE) (FAC $\geq$ 3)	walking distance, functional endurance	•		•	•	
Activities:						
TCT	trunk activity	•		•	•	
BBS	sitting and standing balance	•		•	•	
FAC	walking ability	•		•		
TIS	sitting balance	•		•		
TUG (FAC $\geq$ 3)	walking ability	•		•	•	
Dexterity and related functions and activities						
Functions:						
	muscle strongth	•				
MI for upper extremity	muscle strength					
FMA for upper extremity	selective movements	•		•	•	
Activities:						
FAT*	dexterity	•		•	•	
ARAT*	dexterity	•		•	•	
NHPT*	dexterity	•	•	•		
Basic ADLs						
Activities:						
BI**	basic ADLs	🔵 a				
					-	
Extended ADLs						
Activities:						
NEADL	extended ADLs	●a	•	•		
Perceived quality of life:						
Participation:						
SSQOL	quality of life				•	
Other:						
Functions:						
NNM	range of motion	•				
	range of motion					
MAS	resistance to passive movements			•	•	
EmNSA	somatosensory impairments	•		•	•	
NIHSS***	neurological impairments	•				
CIRS	multimorbidities	•		•	•	
NPRS	pain experienced	•		•	•	
FES	self-efficacy in maintaining balance	•		•	•	
FSSa	fatigue			•	•	
HADS <sup>b,c</sup>	anxiety and depression			•		
MoCAb	cognitive functions	•		•	•	
0-LCT <sup>b</sup>	neglect	•		•	•	
Activition	5				-	
Activities:	functional status					
mRS	functional status	•		•		
Environmental factors:						
CSId	caregiver strain			•		
Recommended assessment points		(H)AR	VR	LR	RC	Chapter (
Basic measurement instruments						
Always to be administered:						
during the diagnostic process		•		•		
at conclusion of treatment period and when transferring a	patient to another physical therapist	•		•		
at the end of the first week, and 3 and 6 months after the s	troke			•		
To be administered depending on context:						
just before any interdisciplinary consultation (functional [re	habilitation] outcomes	•		•	•	
timing of administration depends on patient's presenting p					•	
and/or at the physical therapist's discretion	sing corresponding treatment Bould					
Recommended measurement instruments						
To be administered depending on context:						
	roblem and corresponding treatment goals,	•		•	•	

(H)AR = hyperacute or acute (rehabilitation) phase; VR = early rehabilitation phase; LR = late rehabilitation phase; RC = rehabilitation during chronic phase. • Phase in which the basic / recommended measurement instrument is administered.

10MLT = Ten-meter walk test; 6MWT = Six-minute walk test; ARAT = Action Research Arm Test; BI = Barthel Index; BBS = Berg Balance Scale; Borg RPE = Borg Rating of Perceived Exertion; CIRS = Cumulative Illness Rating Scale; CSI = Caregiver Strain Index; EmNSA = Erasmus MC modification of the (revised) Nottingham Sensory Assessment; FAC = Functional Ambulation Categories; FAT = Frenchay Arm Test; FES = Falls-Efficacy Scale; FMA = Fugl-Meyer Assessment; FSS = Fatigue Severity Scale; HADS = Hospital Anxiety and Depression Scale; MAS = Modified Ashworth Scale; MI = Motricity Index; MoCA = Montreal Cognitive Assessment; mRS = Modified Rankin Scale; NEADL = Nottingham Extended ADL index; NIHSS = National Institutes of Health Stroke Scale; NHPT = Nine Hole Peg Test; NZM = Goniometer using the Neutral-Zero method; NPRS = Numeric Pain Rating Scale; O-LCT = O-Letter Cancellation Test; SSQoL = Stroke-Specific Quality of Life scale; TCT = Trunk Control Test; TIS = Trunk Impairment Scale; TUG = Timed Up and Go test.

a To assess the premorbid situation. b Intended to detect and report; treatment not primarily within the physical therapy domain. c To be administered from 7 days after the stroke. d After patient is discharged home or after trial stay at home, provided an informal caregiver is present. \* Possibly to be derived from occupational therapy file. \*\* Possibly to be derived from nursing file. \*\* Possibly to be derived from medical file.

General treatment options		Section
Teleconsultation/ telerehabilitation	to facilitate self-management, independent exercising, and empowerment in patient's own domestic and community environment (Level 2)	B.6
Self-management	to facilitate patient's control of own treatment and initiative	B.7
Lifestyle programs	with aerobic training (clinimetrics and program structure according to KGNF Guideline on Cardiac Rehabilitation) to reduce risk factors for stroke if history of TIA or 'minor stroke' (Level 2)	B.8
Falls prevention	to improve walking ability, including screening for elevated falls risk and implementing multifactorial treatment strategy (Level 4)	B.9

Are any aids required for mo	bility?	Section
walking aids	to improve walking ability (safety, independence, efficiency, confidence) (Level 2)	F.3.1
leg orthoses	to improve walking ability (walking speed, energy consumption, walking distance (Level 2)	F.3.2
wheelchair	To improve mobility of non-ambulatory patients (safety, independence, radius of action) (Level 4)	F.3.3

Does patient have any lin	itations of other ADLs regarding:	Section					
dyspraxia?	consult occupational therapist and/or (neuro)psychologist: strategy training; gestural training	F.6.2					
leisure time activities? consult occupational therapist: learning/re-learning and resuming leisure or social activities in home setting F.							
Does patient have limitations of cognitive abilities regarding: Sect							
attention span?	consult (neuro)psychologist: companyation strategies training	6.1					

boes putient nuve mintutions	or cognitive abilities regarding.	Section
attention span?	consult (neuro)psychologist: compensation strategies training	G.1
memory?	consult (neuro)psychologist: strategy training using internal and/or external strategies	G.2
attention for neglected side?	consult (neuro)psychologist: visuele scanning training	G.3
